Focuses on the evolution of landforms in the Western Himalaya, providing an essential guide for predictive, protective and remedial measures to mitigate the natural hazards which plague the region and constrain development. Backpacker brings the outdoors straight to the reader's doorstep, inspiring and enabling them to go more places and enjoy nature more often. The authority on active adventure, Backpacker is the world's first GPS-enabled magazine, and the only magazine whose editors personally test the hiking trails, camping gear, and survival tips they publish. Backpacker's Editors' Choice Awards, an industry honor recognizing design, feature and product innovation, has become the gold standard against which all other outdoor-industry awards are measured. Prato and Fagre offer the first systematic, multi-disciplinary assessment of the challenges involved in managing the Crown of the Continent Ecosystem (CCE), an area of the Rocky Mountains that includes northwestern Montana, southwestern Alberta, and southeastern British Columbia. The spectacular landscapes, extensive recreational options, and broad employment opportunities of the CCE have made it one of the fastest growing regions in the United States and Canada, and have lead to a shift in its economic base from extractive resources to service-oriented recreation and tourism industries. In the process, however, the amenities and attributes that draw people to this 'New West' are under threat. Pastoral scenes are disappearing as agricultural

lands and other open spaces are converted to residential uses, biodiversity is endangered by the fragmentation of fish and wildlife habitats, and many areas are experiencing a decline in air and water quality. **Sustaining Rocky Mountain Landscapes** provides a scientific basis for communities to develop policies for managing the growth and economic transformation of the CCE without sacrificing the quality of life and environment for which the land is renowned. The book begins with a natural and economic history of the CCE. It follows with an assessment of current physical and biological conditions in the CCE. The contributors then explore how social, economic, demographic, and environmental forces are transforming ecosystem structure and function. They consider ecosystem change in response to changing patterns of land use, pollution, and drought; the increasing risk of wildfire to wildlife and to human life and property; and the implications of global climate change on the CCE. A final, policy-focused section of the book looks at transboundary issues in ecosystem management and evaluates the potential of community-based and adaptive approaches in ecosystem management. **Non-fiction history of sunken, buried and lost treasures in the Lake Tahoe region. Includes 25 images and 10 maps showing ghost towns and lost mines.** From its inception as Arnold, Schwinn & Co. in 1895, Schwinn has built what have arguably been the best and most desirable bikes in the United States. This new title in the Enthusiast Color Series offers a comprehensive overview of the great Schwinn bikes, with chapters devoted to the early history of the company and its bicycles, classic balloon-tire bikes of the 1930s and 1940s, stylish and groundbreaking lightweights and racers of the 1950s, and all those fabulous Sting-ray and Krate "muscle bikes" from the

1960s and swingin' '70s. In addition, the modern era of mountain bikes, road bikes, BMX bikes, and the return of the Black Phantom are also featured. All-color photography of bicycles in mint condition is supplemented with classic period print advertisements. Originally published in 1987, this book describes and discusses the vegetation of rivers and other watercourses in Europe with an emphasis upon distributional, community and historical ecology. It was firmly based upon many years of field investigations carried out by the author in various countries in the European Economic Community. The main purpose of the text was to increase the understanding of river vegetation in relation to the varying physical characteristics of the watercourses. The rivers of the EEC are considered in detail, with an emphasis upon the influences of landscape, geology, climate, settlement patterns, water use and management and pollution. This book will be of value to anyone with an interest in river botany. Through a historical analysis of the bicycle industry, this book explores how the bicycle was developed, manufactured and marketed, from its origins in the late nineteenth century to the present day. The author highlights the contributions made by the bicycle industry to marketing as it is understood today, tracing key innovations in product development and marketing. Addressing a gap in the literature, this book provides an insightful history of marketing practice for one of the most important products of the twentieth century. This collection of papers comprises almost all major areas of interest of Werner Vycichl: Egyptology and Coptology, Semitic linguistics, Beja (Northern Cushitic), Chadic, and general Semito-Hamitic (Afro-Asiatic) comparative linguistics.
