Rationale: Breast cancer is the most commonly diagnosed cancer, excluding skin cancers, and is the second leading cause of cancer death among women in the United States. Despite advancements in screening, early detection,

and cancer treatments, not all women have benefited equally. Racial and ethnic minorities, particularly African American women, and those of low income have higher breast cancer mortality rates compared to the general population. Previous research has identified a number of demographic (e.g., race/ethnicity, age, health insurance, income), medical (e.g., comorbidities with other illnesses, family medical history), environmental (e.g., geographic area), and health system (e.g., type of cancer-related services available) factors associated with breast cancer disparities. However, these factors have largely been examined individually, and no study has comprehensively evaluated how multiple individual and contextual factors impact breast cancer outcomes. Therefore, this dissertation project had two primary aims: 1) to identify distinct subgroups of breast cancer patients based on demographic, medical, environmental, and health system factors that have been shown to influence timeliness of breast cancer care, and 2) to examine differences among emergent classes in timely initiation of breast cancer treatment. Design: The proposed study used archival data from the control arm of the Patient Navigation Research Project (PNRP), a five-year 10-site clinical trial of adult patients from medically underserved populations with an abnormal cancer screening or a new diagnosis of breast, cervical, colorectal, or prostate cancer. For this study, the sample included 198 patients with newly diagnosed

Stage I-III breast cancer who received usual standard of care (control arm) from four PNRP sites, and who received a treatment for breast cancer (e.g., surgery, chemotherapy, radiation, hormonal therapy). Control participants were primarily recruited via medical record abstraction for which informed consent was waived. Exploratory Latent Class Analysis (LCA) was used to identify subgroups of breast cancer patients based on demographic (race/ethnicity, age at diagnosis, health insurance status, annual household income), medical (comorbidities [Charlson Comorbidity Index], family history of cancer), environmental (geographic residence [urban vs. rural], and health system (cancer-related services available onsite) factors associated with timeliness of breast cancer care. For the second aim, the study conducted logistic regression analyses to examine if class membership significantly predicted timely breast cancer treatment initiation, defined as initiation of any treatment for breast cancer (e.g., surgery, chemotherapy, radiation, hormonal therapy) within 30 or 60 days of diagnosis, controlling for type of breast cancer treatment. Results: Three classes of breast cancer patients were identified with varying patterns of patient demographic, medical, and health system characteristics. The first class was distinguished by its high endorsement of indicators associated with timely breast cancer care; patients in this class were most likely to be White, have private health insurance, and have a family history of

cancer. The second class was characterized by individual and contextual factors associated with treatment delays, including having public health insurance, not having a family history of cancer, and receiving care at a facility with the least amount of breast cancer services available onsite. The third class represented breast cancer patients with the oldest average age at diagnosis and the greatest number of medical comorbidities. Binomial logistic regression analyses demonstrated that the emergent classes did not significantly differ in the likelihood of initiating breast cancer treatment within 30 days or 60 days from breast cancer diagnosis, controlling for type of treatment. Conclusions: The present study used LCA to derive classes of breast cancer patients based on simultaneous evaluation of demographic, medical, environmental, and health system factors associated with timely breast cancer care. However, the emergent classes did not significantly differ in terms of timely initiation of breast cancer treatment following definitive diagnosis of breast cancer. The relatively small and homogenous study sample may have obscured differences in timeliness of breast cancer treatment initiation. Future studies should utilize LCA with larger, more diverse samples of breast cancer patients to identify distinct classes with unique combinations of individual and contextual characteristics that influence timeliness of breast cancer care. Identification of distinct typologies of breast cancer patients provides a deeper

understanding of how the combination of factors synergistically impacts breast cancer outcomes and can help target interventions to specific subgroups of patients that are most likely to experience delays in breast cancer care. Adjuvant treatment is administered prior to or as follow up to surgical procedures for breast cancer. Proven success in using medical therapies allowing for breast conserving procedures or reducing risk of occurrence. Although there has been much progress towards a cure, including the introduction of new targeted therapies, metastasizing cancer remains highly incurable. With the current advances in chemotherapy and hormonal drugs for breast cancer, as well as in surgical techniques and procedures, a revised edition of this popular textbook has become increasingly necessary. Completely overhauling the existing material, the editors of this important work have provided a full update of the area, focusing in particular upon the topics where there has been most progress and controversy. Today, more breast cancer treatment options are available than ever before. But how can you determine the course of action that is right for YOU? Breast Cancer: Beyond Convention is the only single resource that lays out all of the traditional and alternative approaches available today. Assembling a "dream team" of breast cancer experts, the editors of this truly groundbreaking guide encourage readers to work with their practitioners as they consider a variety of approaches, all explained in clear,

nontechnical language. Readers will discover how to find the right caregiver and how to best complement conventional medical treatment with alternative medicine how to be "healed" without necessarily being "cured" how to incorporate traditional Chinese medicine -- including herbs, qigong, and acupuncture the right diet to choose, no matter the form of treatment; the importance of soy products; plus fifteen delicious recipes to sample the best vitamins, minerals, and natural foods, and the specific benefits -- and possible dangers -- of each the merits of spiritual treatments, from meditation and directed prayer to the powerful mystery of the "will to live." The guide features an encyclopedic appendix of websites, and lists of national support organizations, care centers, recommended audiotapes, CDs, and books -- making this the single source to help patients take control of their treatment, assuage their fears, and get them on the road to healing. A portion of the proceeds from the sale of this book will be donated to the Carol Franc Buck Breast Care Center Complementary and Alternative Medicine Program at the University of California, San Francisco Having breast cancer can be devastating for the woman affected - and for her family and loved ones. It can also be confusing, because there are many variations of the disease and at least as many treatments. By bringing together comprehensive information on the subject, Breast Cancer Basics and Beyond helps women better understand their illness and participate

in making decisions about all aspects of their treatment and care. In this book, award-winning medical writer Delthia Ricks tells you all about: common and rare types of breast cancer, their causes and symptoms, diagnosis, including mammography and different kinds of biopsies, treatment options, including lumpectomy, mastectomy, chemotherapy, radiation and hormone therapy, benefits and side effects of the most commonly used drugs, your risk factors, including ethnicity, genetics, hormones and diet, life after cancer, follow-up care and dealing with recurrence, reasons for hope: breast cancer research and treatments in development. The book 'Breast Cancer and Surgery' summarizes the treatment options from the onset of breast carcinogenesis to early-local advanced and metastatic breast cancer. Chemotherapy alternatives, drug resistance and local and surgical treatment preferences are extensively discussed and this information is especially directed at clinicians, researchers, and students. This book includes a comparison between different chemotherapy agents and targeted therapies with published phase II-III studies. The importance of palliative care and dietary supplements administered during the treatment course in reducing the comorbidity of patients is emphasized. Photodynamic treatments have been included in this book. A comprehensive and up-to-date information exchange that can be accessed through a single source is provided to all researchers interested in breast cancer. This

issue of Surgical Oncology Clinics of North America, guest edited by Dr. Kelly Hunt, is devoted to Changing Paradigms in Breast Cancer Diagnosis and Treatment. Dr. Hunt has assembled expert authors to review the following topics: Tomosynthesis in breast cancer imaging: how does it fit into preoperative evaluation and surveillance?; Lobular breast cancer: different disease, different algorithms?; Hypofractionated radiation therapy in breast conserving therapy; Oncoplastic breast reconstruction: should all patients be considered?; Neoadjuvant endocrine therapy: who benefits most?; Breast cancer disparities: how can we leverage genomics to improve outcomes?; Anatomy and breast cancer staging: is it still relevant?; When does atypical ductal hyperplasia require surgical intervention?; Surgical intervention for lymphedema; Are there alternative strategies in the local management of DCIS?; Genetic testing and genetic counseling: what is standard of care?; Molecular subtypes and local-regional control of breast cancer; Intraoperative margin assessment in breast cancer management; Triple negative breast cancer: who should receive neoadjuvant chemotherapy?; and more! Covering major aspects of health care nursing, this handbook is written from a holistic viewpoint and involves the roles of the multidisciplinary team. It is intended for newly qualified nurses and community nurses and breast care nurses should also find it useful. The text aims to help readers broaden their

knowledge about breast cancer and show them how to help patients and their families cope with the diagnosis and treatment of this disease. "The Breast Book presents a wealth of information, from the anatomy of the breast to its cultural significance and sexual character, from breastfeeding and breast self-examination to cosmetic surgery, benign breast changes, and breast cancer. In her uniquely sympathetic style, Dr. Miriam Stoppard gives indispensable advice on breast care at all stages of a woman's life--from early menstruation to menopause and beyond--with particular emphasis on the early detection and treatment of breast cancer. Writing with warmth and candor, Dr. Stoppard addresses women's fears, assumptions, and feelings about their breasts. With its expert guidance and up-to-date medical information, including a comprehensive list of useful Canadian organizations and support groups, "The Breast Book offers every woman the confidence and knowledge to make informed decisions about the health of her breasts--and to take charge of her body and her life. With over 200 full-colour illustrations, sonograms, and charts, this important new book includes complete Canadian sources and the latest North American research. This book is a comprehensive guide to breast toxicity. Adjuvant radiation remains standard for a majority of women who undergo breast-conserving surgery for breast cancer, and indications for post-mastectomy and regional lymph node irradiation have also broadened

with recent publications. At the same time, locoregional recurrence has declined and survival has improved in recent decades. In the current era of excellent breast cancer outcomes, then, considering the balance between toxicity and outcomes becomes paramount. Several recent editorials recommend considering toxicity against the potential benefit of adjuvant radiation in tailoring radiation decisions for individual patients. Thus, a clear understanding of the potential toxicities of adjuvant radiation for breast cancer is critical to optimizing outcomes in modern breast cancer management. Here, authors have collected recent data focused on toxicity of treatment that provide an opportunity for improving this optimization. Chapters cover both acute and late toxicity of radiation for breast cancer, including tailored risk assessment for each of these potential toxicities, considerations for including risk of toxicity in management decisions, and toxicity management strategies. This is an ideal guide for radiation oncologists, residents, and oncologists seeking to optimize care for their patients. This book discusses the impact on women of the diagnosis and treatment of early breast cancer. Readers will learn about the risks of breast cancer recurrence and interventions to reduce these, such as endocrine therapy and bisphosphonate therapy, as well as the role of lifestyle factors such as diet and exercise. The long-term effects of treatment on fertility, the heart and other

systems are discussed, as well the psychological burden for women who are increasingly likely to be cured from their cancer. Each chapter provides background and a practical guide in the management of women after the initial phase of diagnosis and treatment. Authored by a multidisciplinary team this book provides all the relevant expertise as well as different perspectives, providing a holistic picture of early breast cancer consequences. From oncologists to general practitioners as well as specialist nurses, gynaecologists, psychologists and other healthcare professionals involved in the long-term care of women with breast cancer, this book provides a timely and indispensable guide to practitioners caring for early breast cancer survivors. This textbook provides a comprehensive overview of the state of the art knowledge of breast cancer management for the modern breast surgeon. It covers all aspects of multidisciplinary care including primary breast and axillary surgery, reconstruction and oncoplastic techniques, external beam radiotherapy and newer techniques such as tomotherapy, intraoperative radiotherapy and brachytherapy. In addition, systemic therapies including chemotherapy, the latest biological targeted therapies and endocrine therapies are covered. Readers can find out about other important aspects of breast cancer such as genetics, screening, imaging and long-term health among others. Chapters take the reader through the basics up to the

highest levels of knowledge in an easy to understand format with management algorithms to aid clinical care, generous referencing of the best literature and figures and photographs to illustrate each section. Published with the official approval of the European Society of Surgical Oncology (ESSO) and the European Society of Breast Cancer Specialists (EUSOMA), the book is written by a panel of recognised leaders in the field and is an indispensable guide for the practicing breast specialist and senior specialists in training, wishing to update their knowledge with the latest trends or polish off their training before accreditation. Developing or existing breast cancer centres strive to provide the highest quality care possible within their current financial and personnel resources. Although the basics in diagnosis and treatment of breast cancer are well known, providing, monitoring, and assessing the care offered can be challenging for most sites. Based on the work of the International Congress of Breast Disease Centres, this book provides a comprehensive overview of how to start or improve a breast unit wherever you live. Written by a multidisciplinary team of over 100 experts from 25 countries, it provides a practical guide for how to optimally organise high quality integrated breast cancer care, whilst taking into account the local economics and resources available to different countries. Each component of the care pathway, including imaging, surgery, systemic treatment, nursing,

and genetic assessment, is discussed from a theoretical and practical aspect. The authors define targets to strive for, methods to assess care, and key recommendations for how to improve within existing limitations. Finally, the book looks beyond the breast care unit to consider accreditation and certification, emerging technologies, media, and the role of governments. This guide will be valuable for anyone working in the field of integrated breast cancer care, including established breast care experts, those new to the field, and policy makers interested in the social, financial, and political aspects of improving breast care quality. In recent years, an expanding body of research evidence has begun to highlight the value of nursing care. This evidence confirms what nurses have known for many years - that nursing care helps more patients to get better quicker. Patients value nurses as those members of the health care team that make them feel 'human' and ensure that their treatment is not more of an ordeal than their illness. The research also shows that nursing care is value for money. For the 29000 women who are diagnosed with breast cancer annually, the value of nursing is self evident. Every woman should have access to the care, expertise and support of a breast care nurse. Nursing care is changing. Patients are rightly more informed about different treatment options and more assertive in seeking high quality services. They are much more likely to be aware that breast care nurses have a special

service to offer and they are very likely to want help and support at home as well as or instead of in hospital., The outreach work of breast care nurses provides a model for many other patient services where people need continuous support from before diagnosis, through diagnosis, surgery or treatment, to after care, rehabilitation and monitoring. This contributed book covers all aspects concerning the clinical scenario of breast cancer in young women, providing physicians with the latest information on the topic. Young women are a special subset of patients whose care requires dedicated expertise. The book, written and edited by internationally recognized experts who have been directly involved in the international consensus guidelines for breast cancer in young women, pays particular attention to how the disease and its planned treatment can be effectively communicated to young patients. Highly informative and carefully structured, it provides both theoretical and practice-oriented insight for practitioners and professionals involved in the different phases of treatment, from diagnosis to intervention, to follow-up - without neglecting the important role played by prevention. Breast cancer is the most common cancer in women in the UK; there are approximately 45,000 new cases every year. A new diagnosis can be very frightening and many people will have no prior knowledge of the disease. This book is for women and their families who are looking for a comprehensive but plain language guide to breast cancer and

its treatments. Many people find that doctors, although highly qualified and well meaning, can forget how little the layperson knows about medical procedures and terminology. Starting with the basics, this guide will look at what breast cancer is and how it's diagnosed, right through to support options, the treatment available and how to care for your carers. The emotional after-effects of being a survivor are also covered in detail. Written by a survivor of breast cancer and peer reviewed by a breast cancer specialist, this book will provide everything women need to know about breast care, being diagnosed with breast cancer and the road to recovery. For many women breast cancer is one of the most distressing of all diseases. Breast Cancer examines the effects of the disease through all stages of diagnosis and treatment. Making extensive use of verbatim accounts by women of their experiences, it intersperses these with relevant findings and theories from recent scientific research. The book's emphasis on the psychosocial impact of the disease and its treatment will help all those who care for breast cancer patients to understand the distress involved and the means of alleviating it. Wherever you are in your career, and whatever involvement you have with caring for women with breast cancer, the fifth edition of 'Fast Facts: Breast Cancer' has something for you. The world-class authors of this popular fact-packed handbook provide practical advice on all the key areas of breast cancer management, from risk factors and

diagnosis to treatment of all cancer stages. But what really makes it stand out from the crowd is the authors' awareness of the information you need when you talk to a woman concerned about breast cancer. The chapter dedicated to perception of risk will refresh your knowledge and help you talk to your patients about their individual prospects, while the short chapter on clinical trials will help you discuss potential participation in trials and answer common questions. Improvements in the management of breast cancer have followed three major themes in recent years: greater optimization of individualized local treatment, longer duration of therapies, and the use of biological therapies targeted at specific receptors. This colorful up-to-date handbook addresses all these trends, alongside the disturbing issues of overdiagnosis as a result of screening and overtreatment. Given the explosion in information technology, patients and their families have access to much more information on their condition and as a result assume a more active role in their medical management. Health professionals have an important role in helping patients sort the facts from the fallacies, put the risks and benefits into perspective and balance their treatment choices. For this reason alone, 'Fast Facts: Breast Cancer' is an invaluable evidence-based resource for everyone working in breast cancer care in primary and secondary settings, from medical and nursing students, to GPs, specialist nurses and residents. And one for your patients too ... The authors encourage you

to make your patients well-informed active partners in their breast cancer care by sharing this highly readable book with them. Contents: • Risk factors • Perception of risk • Pathophysiology • Diagnosis • Local control of primary tumor • Adjuvant therapy • Follow-up and rehabilitation • Management of advanced cancer • Clinical trials • Future trends • Useful resources A Woman's Decision is an extraordinarily sensitive and authoritative book that will help women assess their options, familiarize themselves with the techniques used in treating breast cancer, and prepare themselves for what to expect medically and emotionally from reconstructive surgery. It combines complete and fully updated medical information with a detailed look at the emotional issues a woman must face when confronting breast cancer. Especially reassuring are the interviews conducted with women and their loved ones, discussion feelings and reactions at every stage, including the decision to seek reconstructive surgery. In easy-to-understand language, this new edition features the newest therapies available for breast cancer treatment including: Genetic and hormonal therapy Endoscopic (minimally invasive) surgery Image-guided biopsy and sentinel node biopsy Lumpectomy versus mastectomy Skin-sparing mastectomy and immediate reconstruction Partial reconstruction after lumpectomy Answers to your patients' most vital, heartfelt questions! For years, A Woman's Decision has been the

"go-to" reference for doctors, nurses, and patients as they deal with the physical and emotional trauma surrounding breast cancer and reconstruction. Co-authored by renowned surgeons and a noted publisher and medical editor, this popular and authoritative book has become a trusted resource and valuable patient education tool. Featured on numerous national talk shows (including Oprah), the authors candidly discuss the full range of breast care, breast cancer treatment, and breast reconstructive options. Many doctors and breast centers use this book as their preferred method of informed consent. Patients love it, and breast centers, support groups, physicians, and societies recommend it. It is also a great gift for your surgical, oncologic, and radiologic colleagues. This new fourth edition has been totally revised and updated to reflect the latest developments in breast cancer treatment and recent advances in breast reconstruction. Written in an accessible manner, it provides women and their families with the information they need to make decisions about their own health care. Best of all, it takes complex and frightening topics and explains them in an understandable and non-threatening manner, providing women with the knowledge they need to feel confident in their decisions, their therapies, and their caregivers. It covers doctor-patient communication, mammography and breast self-examination, breast lumps, cancer facts and treatment options, and even the effects of breast cancer on relationships

with family and friends. New information has been added on genetics and genetic counseling, oncoplastic surgery, new approaches to chemotherapy and breast irradiation, and new breast reconstruction techniques, including perforator flap reconstruction, reconstruction with the newer gel-filled implants, and prophylactic or preventive mastectomy. In addition to descriptions of the different cancer therapies and reconstructive techniques, the book includes numerous drawings which detail the steps involved for each procedure with preoperative and postoperative photos showing the possible results from the different reconstructive approaches. Fifteen patient interviews provide comfort to patients as they ride the physical and emotional roller coaster of breast cancer treatment, recovery, and reconstruction. Each woman has a unique story to tell with a different focus for each interview and coverage of a wide range of different reconstructive options. Many readers have commented that these interviews were "lifesavers" for them because they took away the fear of the unknown. They were reassured by the comments of other women who had walked in their shoes and offered advice to help cope with their treatments. They also appreciated the candid comments these women made about the different reconstructive therapies, fully sharing their experiences and detailing their decisions, therapies, pain, recuperation, complications, and coping mechanisms. If you know someone who is

experiencing the fear and trauma of breast cancer, do her a favor and order this book. A Woman's Decision has become a preferred patient education tool used by plastic surgeons, cancer surgeons, and breast cancer centers worldwide. This sensitive and information-packed book promotes better doctor-patient communication and helps you provide informed consent to your patients, saving you time and money. In this newly updated and revised edition of *Navigating Breast Cancer: A Guide for the Newly Diagnosed, Second Edition*, author Lillie Shockney empowers breast cancer patients and their families by providing authoritative, easy-to-follow information about each step of treatment, helping women to make informed decisions about their care. Armed with this invaluable book, breast cancer patients will be well prepared for each phase of therapy, and perhaps most importantly, will learn how to continue to work and live life while receiving treatment. This outstanding resource provides breast cancer patients with the essential tools they need to cope with symptoms and to navigate the maze of modern treatment options. This practical guide to clinical consultation in oncology has been extensively revised and updated. It reflects recent advances in oncology with particular emphasis on new therapies and the emergence of immunotherapy as a real modality. Each volume in the *Early Detection and Treatment of Cancer Series* is packed with practical, authoritative information designed to cover the

full range of diagnostic procedures, including pathologic, radiologic, bronchoscopic, and surgical aspects. You'll be able to determine the safest, shortest, least invasive way to reach an accurate diagnosis; stage the disease; and choose the best initial treatment for early stages. Based on current evidence in the literature, authors provide clinical, hands-on tools to help you make informed decisions on precisely what tests and imaging studies are needed to diagnose and stage each type of cancer. Practical, authoritative, and highly-illustrated, this volume in the brand new *Early Detection and Treatment of Cancer series* covers current protocols and the latest advances in diagnostic imaging and molecular and serologic markers for breast cancer. Apply expert advice on the best "next-step plan for different presentations and tips for less invasive protocols. Get clinical, hands-on tools to help you make informed decisions on precisely what tests and imaging studies are needed for accurate diagnosis and staging. Clear figures, tables, and boxes illustrate step-by-step care of the full range of problems encountered. The small size and convenient format make this an ideal purchase for diagnostic reference. Outlines the steps after diagnosis to guide you through formulating a treatment or patient care plan. Emphasizes important points—such as the promising new breast cancer vaccine, sentinel node biopsy, and hormone receptor tests—with "key points boxes at the beginning of each chapter and pedagogic features throughout.

Summarizes the process of accurately diagnosing and staging cancer in a logical, almost algorithmic, approach for easy reference. Discusses the treatment of early-stage disease so you have clear options for care. Complements the procedures outlined in the text with full-color photographs and line drawings to reinforce your understanding of the material. Packed with practical, authoritative information designed to cover the full range of diagnostic procedures. The procedural video clips on the included CD-ROM, along with the small size and convenient format, make this an ideal purchase for diagnostic reference. Breast cancer is a disease requiring multidisciplinary management including surgery, medical and radiation oncology, radiology, pathology, nuclear medicine, genetic counseling, and psychological support. Each member of the team needs to be updated continuously on breast cancer treatment because of its rapidly changing nature. From the diagnostic procedures to operations and even in metastatic stages of breast cancer, surgeons play an essential part in multidisciplinary teams. After standard surgical options, oncoplastic breast surgery is rapidly becoming one of the most important surgical topics that should be learned by attending surgeons. The idea of writing this book stemmed from a collaboration between the European Academy of Senology (EAoS), European Institute of Oncology (IEO), Euro-Asian Society of Mastology (ESOMA), and SENATURK (Turkish

Academy of Senology), which have been working together to promote better training in breast care for professionals. The book offers invaluable support for breast surgeons by covering critical and essential information in senology. It will also greatly benefit the other members of multidisciplinary teams, surgery residents, gynecologists, and plastic and reconstructive surgeons. Health care, treatment. Your trusted, no-nonsense guide to detecting and managing breast cancer From the breast health experts at the American Breast Cancer Foundation comes a sensitive and authoritative guide to the most common cancer in women: breast cancer. Covering everything from prevention to dealing with a diagnosis to coping with life after cancer, it serves as a trusted resource for anyone whose life has been touched by this dreaded disease. Advancements in breast cancer prevention, detection, and treatment are being made every day, but it can be overwhelming and confusing knowing where to turn and who to trust. Detecting & Living with Breast Cancer For Dummies distills the information into one easy-to-follow guide, giving you quick, expert advice on everything you'll face as you manage your breast health. From getting to know your treatment options to talking to loved ones about breast cancer—and everything in between—it does the legwork for you so you can take a deep breath and focus on your health. Perform regular self-exams the right way Cope with the many decisions that need to be made if you're

diagnosed Ask the right questions about surgery, chemotherapy, radiation, and breast reconstruction Decipher complicated pathology reports with confidence Whether you're at risk for breast cancer or have been diagnosed and want to know your options, Detecting & Living with Breast Cancer For Dummies empowers you to take your health into your own hands. This comprehensive manual on breast disease deals with all aspects of the surgical management of both benign and malignant disease. The chapters are written by leading experts, clearly illustrated with line drawings, clinical photos and diagnostic radiology images. Breast Surgery is divided into sections following the patterns of patient management from diagnosis through treatment and reconstruction. Part One, "Fundamentals", addresses common aspects of working with breast cancer patients and understanding the members of the breast cancer team. Part Two is an overview of "Biologic Principles". Parts Three, Four, and Five review "The Initial Evaluation", "Common Presenting Problems", and "Diagnostic Techniques". Part Six, an overview of breast cancer treatment, includes chapters on "Breast Cancer Staging", "Introduction to Gene Expression Profiling", and "Psychological Issues". Part's Seven through Twelve deal with important aspects of breast surgery and interdisciplinary care including pathology, medical oncology, and radiation oncology, with several chapters on neoadjuvant therapy and partial breast

irradiation. Part Thirteen includes many chapters on followup of the breast cancer survivor, including late changes on physical exam and imaging, local recurrence, and treating metastatic disease. Though not intended to replace a text reference, Breast Surgical Disease and Interdisciplinary Management offers a comprehensive guide to provide practical advice for those seeking concise, expert input that can be quickly accessed on multiple topics associated with the care of the breast cancer patient. From the bestselling authors of "Listen to Your Body" comes life-saving information for women of any age. The volume raises attention to the need of a completely new approach to breast cancer based on the knowledge collected on early breast cancer in the past two decades. The chapters are contributed by experts of all the fields participating in the clinical research and care of breast cancer. The practical importance of such a book is underlined by the increasing number of breast cancer cases, and also the increasing proportion of early stage-cases. The ultimate goal of the book is to point to the heterogeneous nature of the disease which is more striking and has more importance in care at the very early stages than at the more advanced stages. The book recommends the utilization of all the information provided by multimodality imaging and special pathological methods, a new classification system and therapeutic guidelines since early breast cancers should not be treated based on

experience obtained with palpable tumors. No similar book has been yet released to the market. The book is written for all the members of the team participating in the diagnosis and treatment of breast cancer (radiologists, pathologists, surgeons, clinical and radiation oncologists), but may be useful for medical students and residents too. The chapters are illustrated with didactic pictures, and special emphasis is given to provide a peep into the practice of the special procedures for the careful examination and individualized therapy of each case. The book provides, in a comprehensive yet concise way, essential information to improve the knowledge and skills of all healthcare providers involved in the treatment of patients with breast cancer. The content does not focus on general information that is widely available via different sources, but on technical aspects - "hands-on" daily practices and principles of radiation oncology that are not included in other books. Drawing on information taught in courses at e.g. the ESTRO School, as well as the authors' broad clinical experience, the respective contributions reflect and share the expertise of leading experts in breast cancer radiation therapy, supported by sound data and evidence. Each chapter includes a short introduction summarizing the evidence in the literature and "pearls" (a short bullet-point summary), and is enriched by tables, figures and illustrations to provide a concise, easy-to-follow and appealing overview. The book, containing also useful

electronic supplementary material, will be of interest to a wide range of readers, including radiation oncologists, radiation technicians, medical physicists, and others involved in breast cancer care. This book provides a clinically useful resource for evaluation and management of the symptoms and issues that burden survivors of breast cancer. Improvements to breast cancer screening and treatment have resulted in more patients than ever before having been cured after local definitive and systemic therapies. Primary care providers and specialists must be increasingly familiar with the issues that breast cancer survivors routinely face. This is the first book to provide a single resource for common issues faced by breast cancer survivors from a truly multidisciplinary perspective; each chapter of this text is coauthored by at least one oncologist and one specialist outside the field of oncology in order to include the perspectives of relevant disciplines. User-friendly and clinically applicable to all specialties, individual chapters also include tables and figures that describe how best to conduct initial evaluation of the given symptom as well as an algorithm, where applicable, outlining the optimal management approach. Common Issues in Breast Cancer Survivors: A Practical Guide to Evaluation and Management empowers non-cancer specialists and practitioners who care for breast cancer survivors to address common issues that impact patient quality of life. "This book is an excellent resource for nurses working in either a hospital

or primary care" —Breast Cancer Care News
"This book would be really helpful to other breast cancer nurses and students about to embark on work in this field" —Journal of Community Nursing This comprehensive handbook is for nurses and other healthcare professionals involved in the care of people with breast cancer. It gives up-to-date evidence-based information and practical advice on nursing care throughout diagnosis, treatment, recovery and end-of-life care. Each chapter is written by an expert in the field. Topics include the anatomy of the breast, available treatments, complementary therapies, the psychological care of patients and their families, and the role of the specialist nurse. This book provides a well-balanced approach to all aspects of managing breast malignancy. The importance of writing from a nursing perspective is underlined so that the essence of support and bedside care is maintained. This second edition includes: Updates on guidelines as well as references to recent trials and changes to the breast screening programme A new chapter on survivorship issues covering the long-term consequences and effects of recovering from breast cancer BREAST CANCER is the first volume of The MD Anderson Cancer Care Series, featuring the best standard treatment protocols from the experts at MD Anderson Cancer Center. As more is learned about the relative roles of different treatment modalities, a pattern of practice is emerging where several different

disciplines are involved early in the diagnostic and treatment phases of breast cancer. The impact of new and established diagnostic approaches that utilize radiodiagnosis and pathology in combination are requiring that a full range of special expertise from these disciplines be made available to patients. This clinical guidebook is an essential resource for the busy practitioner, allowing for quick, authoritative access to the latest and best in multimodality therapies. Topics covered in this volume include screening for early detection of breast cancer, hereditary breast/ovarian cancer genetic syndromes, diagnostic radiology, ultrasonography, pathology, surgical options, radiation therapy for early and advanced breast disease, tumor markers, standard and high-dose chemotherapy, hormonal therapy, reconstructive surgery, post-treatment rehabilitation, and symptom management and quality of life. Over 125 photographs and line-drawings illustrate the principles discussed in the text. This handbook will become an important guide and resource for community oncologists, as well as general surgeons, internists, and family practitioners. Contents include: The breast in history and history of the treatment of breast cancer; Anatomy of the female breast; Physiology of the breast; Breast examination and self-examination; Surgery of the breast; Complications of surgery; Sentinel node biopsy; Lymphedema; Complimentary and alternative methods of the treatment of breast cancer; Pathology of the breast and cancer;

Radiology and breast disease; Genetics and cancer; Nursing administration and the cancer patient; Diet and nutrition; Cancer of the breast and chemotherapy; Hormones and breast cancer; Radiation therapy; Stem cell transplantation; Plastic surgery; Anaesthesia; Breast cancer prevention. This book deals with the essential factors in the personalization of treatment for primary breast cancer. These include host issues, lymph node surgery, radiation therapy, and preoperative systemic treatment requiring specialized knowledge, multidisciplinary care experience, techniques, and research. Locoregional treatment in conjunction with systemic treatments is another important factor, with options for local therapy significantly affected by genetic BRCA mutation. Axillary treatment issues have become top priorities in recent primary breast cancer care, and these are highlighted in the book's presentation of technological advances in lymph node mapping and diagnosis, axillary clearance in patients with nodal metastasis, and the role of axillary surgery. Attention is also given to locoregional treatment after preoperative systemic therapy. Because therapeutic impact differs depending upon biological characteristics such as tumor subtype, local therapy should be based both on tumor biology and on therapeutic response in parallel. Associated translational research and mathematical prediction tools such as nomograms also are introduced. This book provides the essence of primary breast cancer

care, particularly its individualization with novel therapeutic concepts and strategies, and will greatly benefit physicians and clinical investigators in breast cancer institutions. The basic information needed to make informed choices about cancer care is covered in this book, including key facts about surgery, radiotherapy, chemotherapy, hormone therapy, targeted therapy and complementary treatments. There is also advice regarding advanced breast cancer. *A Woman's Decision* is an extraordinarily sensitive and authoritative book that will help women assess their options, familiarize themselves with the techniques used in treating breast cancer, and prepare themselves for what to expect medically and emotionally from reconstructive surgery. It combines complete and fully updated medical information with a detailed look at the emotional issues a woman must face when confronting breast cancer. Especially

reassuring are the interviews conducted with women and their loved ones, discussion feelings and reactions at every stage, including the decision to seek reconstructive surgery. In easy-to-understand language, this new edition features the newest therapies available for breast cancer treatment including: Genetic and hormonal therapy Endoscopic (minimally invasive) surgery Image-guided biopsy and sentinel node biopsy Lumpectomy versus mastectomy Skin-sparing mastectomy and immediate reconstruction Partial reconstruction after lumpectomy This book provides an up-to-date review of the risk factors and genetics influencing the development of this rare disease. This volume presents clinical features and recent advances in histopathology and molecular profiling are analyzed, providing a valuable aid to clinicians in tailoring treatment to both the patient and the tumour.

Readers will find important insights into the most effective strategies for making or negating a diagnosis of MBC. Within this timely volume, consideration is also given to the psychological needs of men with breast cancer alongside a discussion of the most effective support methods. The surgical management of the disease is examined, together with algorithms for local and systemic therapy. Owing to the problem of late diagnosis in MBC, many men have advanced or disseminated disease at diagnosis and, as such, the evidence-based management of these cases is reviewed. *Male Breast Cancer* concludes with a discussion on determining prognosis and the likely future developments in MBC with a focus on improved diagnosis and survival. *Male Breast Cancer* will be of interest to breast surgeons, oncologists, breast radiologists, breast histopathologists and breast care nurses worldwide.
