Active Materials Jan 18 2023 What are active materials? This book aims to introduce and redefine conceptions of matter by considering materials as entities that 'sense' and respond to their environment. By examining the modeling of, the experiments on, and the construction of these materials, and by developing a theory of their structure, their collective activity, and their functionality, this volume identifies and develops a novel scientific approach to active materials. Moreover, essays on the history and philosophy of metallurgy, chemistry, biology, and materials science provide these various approaches to active materials with a historical and cultural context. The interviews with experts from the natural sciences included in this volume develop new understandings of 'active matter' and active materials in relation to a range of research objects and from the perspective of different scientific disciplines, including biology, physics, chemistry, and materials science. These insights are complemented by contributions on the activity of matter and materials from the humanities and the design field. Discusses the mechanisms of active materials and their various conceptualizations in materials science. Redefines conceptions of active materials through interviews with experts from the natural sciences. Contextualizes, historicizes, and reflects on different notions of matter/materials and activity through contributions from the humanities. A highly interdisciplinary approach to a cutting-edge research topic, with contributions from both the sciences and the humanities.

By the Sweat of Their Brow Jul 20 2020 The pit brow lasses who sorted coal and performed a variety of jobs above ground at British coal mines prompted a violent debate about women's work in the nineteenth century. Seen as the prime example of degraded womanhood, the pit brow woman was regarded as an aberration in a masculine domain, cruelly torn from her 'natural sphere', the home. The, attempt to restrict women's work at the

mines in the 1880s highlights the dichotomy between the fashionable ideal of womanhood and the necessity and reality of female manual labour. Although only a tiny percentage of the colliery labour force, the pit lasses aroused an interest out of all proportion to their numbers and their work became a test case for women's outdoor manual employment. Angela John discusses the implications of this debate, showing how it encapsulates many of the ambivalences of late Victorian attitudes towards working-class female employment, and at the same time raises wider questions both about women's work in industries seen as traditionally male enclaves, and about the ways in which women within the working community have been presented by historians. This book was first published in 1980.

Rising Out of Hatred Dec 17 2022 From a Pulitzer Prize-winning reporter, the powerful story of how a prominent white supremacist changed his heart and mind. This is a book to help us understand the American moment and to help us better understand one another. "The story of Derek Black is the human being at his gutsy, self-reflecting, revolutionary best, told by one of America's best storytellers at his very best. *Rising Out of Hatred* proclaims if the successor to the white nationalist movement can forsake his ideological upbringing, can rebirth himself in antiracism, then we can too no matter the personal cost. This book is an inspiration." —Ibram X. Kendi, National Book Award-winning author of *Stamped from the Beginning: The Definitive History of Racist Ideas in America* Derek Black grew up at the epicenter of white nationalism. His father founded Stormfront, the largest racist community on the Internet. His godfather, David Duke, was a KKK Grand Wizard. By the time Derek turned nineteen, he had become an elected politician with his own daily radio show—already regarded as the "the leading light" of the burgeoning white nationalist movement. "We can infiltrate," Derek once told a crowd of white nationalists. "We can take the country back." Then he went to college. At New College of Florida, he continued to broadcast his radio show in secret each morning, living a double life until a classmate uncovered his identity and sent an email to the entire school. "Derek Black ... white supremacist, radio host ... New College student???" The ensuing uproar overtook one of the most liberal colleges in the country. Some students protested Derek's presence on campus, forcing him to reconcile for the first time with the ugliness of his beliefs. Other students found the courage to reach out to him, including an Orthodox Jew who invited Derek to attend weekly Shabbat dinners. It was because of those dinners—and the wide-ranging relationships formed at that table—that Derek started to question the science, history, and prejudices behind his worldview. As white nationalism infiltrated the political mainstream, Derek decided to confront the damage he had done. *Rising Out of Hatred* tells the story of how white-supremacist ideas migrated from the far-right fringe to the White House through the intensely personal saga of one man who eventually disavowed everything he was taught to believe, at tremendous personal cost. With great empathy and narrative verve, Eli Saslow asks what Derek Black's story can tell us about America's increasingly divided nature.

Socialism and the Experience of Time Apr 09 2022 How do we make social democracy? Should we seize the unknown possibilities offered by the future, or does real change develop when we focus our attention on the immediate present? The modern tradition of social revolution suggested that

the present is precisely the time that needs to be surpassed, but can society change without an intimate focus on today's experience of social injustice? In *Socialism and the Experience of Time*, Julian Wright asks how socialists in France from the mid-nineteenth to the mid-twentieth century tried to follow a democratic commitment to the present. The debate about time that emerged in French socialism lay beneath the surface of political arguments within the left. But how did this focus on the present relate to the tradition of revolution in France? What did socialism have to say about social experience in the present, and how did this discussion shape socialism as a movement? Wright examines French socialism's fascination with modern history, through a new reading of Jean Jaurès' multi-authored project to write a 'socialist history' of France since 1789. Then, in four interlocking biographical essays, he analyses the reformist and idealist socialism of the Third Republic, long side-lined in the historical literature. With a sometimes emotional focus on the present times of Benoît Malon, Georges Renard, Marcel Sembat, and Léon Blum, a personal history unfolds that allows us to revisit the traditional narrative of French socialism. This is not so much a story of the future hope for revolution, as an intimate account of socialism, intellectual engagement, and the human present.

The Economic Geography of Cross-Border Migration Jan 06 2022 This handbook presents a collection of high-quality, authoritative scientific contributions on cross-border migration, written by a carefully selected group of recognized migration experts from around the globe. In recent years, cross-border migration has become an important and intriguing issue, from both a scientific and policy perspective. In the 'age of migration', the volume of cross-border movements of people continues to rise, while the nature of migration flows - in terms of the determinants, length of stay, effects on the sending and host countries, and legal status of migrants - is changing dramatically. Based on a detailed economic-geographical analysis, this handbook studies the motives for cross-border migration, the socio-economic implications for sending countries and regions, the locational choice determinants for cross-border migrants, and the manifold economic-geographic consequences for host countries and regions. Given the complexity of migration decisions and their local or regional impacts, a systematic typology of migrants (motives, legal status, level of education, gender, age, singles or families, etc.) is provided, together with an assessment of push factors in the place of origin and pull factors at the destination. On the basis of a solid analytical framework and reliable empirical evidence, it examines the impacts of emigration for sending areas and of immigration for receiving areas, and provides a comprehensive discussion of the policy dimensions of cross-border migration.

The Popish Plot Mar 28 2021 In 1678, against a backdrop of paranoiac fear of Catholicism, Titus Oates and his followers succeeded in convincing both Parliament and the public of a Jesuit and Catholic conspiracy to assassinate Charles II and overthrow the Protestant establishment. As a result, hundreds of Catholics suffered imprisonment and 24 were executed. Here is the background of that plot, its development, and its long-term repercussions. "With the technical mastery of a seasoned professional...he retells in vivid detail an extraordinary tale of human credulity, knavery, and folly."--The Times.

Jorge Luis Borges in Context Feb 07 2022 Jorge Luis Borges (1899-1986) is Argentina's most celebrated author. This volume brings together for the first time the numerous contexts in which he lived and worked; from the history of the Borges family and that of modern Argentina, through two world wars, to events including the Cuban Revolution, military dictatorship, and the Falklands War. Borges' distinctive responses to the Western tradition, Cervantes and Shakespeare, Kafka, and the European avant garde are explored, along with his appraisals of Sarmiento, gauchesque literature and other strands of the Argentine cultural tradition. Borges' polemical stance on Catholic integralism in early twentieth-century Argentina is accounted for, whilst chapters on Buddhism, Judaism and landmarks of Persian literature illustrate Borges's engagement with the East. Finally, his legacy is visible in the literatures of the Americas, in European countries such as Italy and Portugal, and in the novels of J. M. Coetzee, representing the Global South.

European public sector accounting May 30 2021 Public sector accounting (PSA) and reporting was subject to considerable national reforms during the last decades and is in the focus of the European Commission aiming to harmonize the accounting systems of its Member States by developing European Public Sector Accounting Standards (EPSAS). Therefore, the topic is of high relevance for both academia and practitioners. This book provides different views about PSA in Europe as of today. It spans topics such as history of PSA, its differences to private sector accounting and finance statistics, as well as budgeting. A main part is devoted to International Public Sector Accounting Standards (IPSAS) by addressing their spread, conceptual framework and selected public sector specific standards, including a case study. Also, consolidated financial reporting is covered by drawing examples. This textbook is not only of use for students and researchers, but interested readers that seek for broad perspectives on PSA such as practitioners and members of intergovernmental organisations. It intends to complement university teaching modules on PSA as those accessible for free under www.offene.uni-rostock.de/online-course-european-public-sector-accounting.

What Brexit means for EU and UK social policy Jan 14 2020 Drawing on a range of disciplinary, conceptual and theoretical approaches, this book analyses the complex interconnections between social policy formation and implementation in the European Union before and during the UK's membership. It explores the issues, debates and policy challenges facing the EU at different stages in its development, and shows how the UK promoted and hampered social integration. Shaping the Canons of Ancient Greek Historiography Jun 11 2022 The main focus of this book is the ancient formation and development of the

canons of Greek historiography. It takes a fresh look on the modern debate on canonical literature and deals with Greek historiographical traditions in the works of ancient rhetors and literary critics. Writings on historiography by Cicero, Quintilian, and Dionysius of Halicarnassus are chiefly taken into account to explore the canons of Greek historians in Hellenistic and Roman Imperial Ages. Essential in canon-formation was the concept of classicism which took shape in the Age of Augustus, but whose earlier developments can be traced back to Isocrates, a model rhetor according to Dionysius at the end of the 1st century BC. The analysis explores also late-antique authors of school treatises and progymnasmata, a field where historiography had a pedagogical function. Previous studies on canonical literature have rarely considered historiography. This book examines not only the works of ancient historians and their legacy, but also the relationship between historiography, literary criticism, and the rhetorical tradition.

Plan and Operation of the Third National Health and Nutrition Examination Survey, 1988-94 Apr 28 2021 Describes the plan and operation of the third National Health and Nutrition Survey. The sample for this study of the U.S. population was selected from households in 81 counties across the United States. About 40,000 persons 2 months of age and over were selected, including large samples of both young and old persons. About 12,000 of the sample persons were black Americans, 12,000 were Mexican-Americans, and the remaining 16,000 were of all other race and ethnicity groups. All selected persons were asked to complete an extensive interview and an examination in a large mobile examination center. The survey period is 1988-94, consisting of two phases of equal length and sample size. Both Phase 1 and Phase 2 were random samples of the U.S. population living in households.

The Economic and Fiscal Consequences of Immigration Sep 14 2022 The Economic and Fiscal Consequences of Immigration finds that the long-term impact of immigration on the wages and employment of native-born workers overall is very small, and that any negative impacts are most likely to be found for prior immigrants or native-born high school dropouts. First-generation immigrants are more costly to governments than are the native-born, but the second generation are among the strongest fiscal and economic contributors in the U.S. This report concludes that immigration has an overall positive impact on long-run economic growth in the U.S. More than 40 million people living in the United States were born in other countries, and almost an equal number have at least one foreign-born parent. Together, the first generation (foreign-born) and second generation (children of the foreign-born) comprise almost one in four Americans. It comes as little surprise, then, that many U.S. residents view immigration as a major policy issue facing the nation. Not only does immigration affect the environment in which everyone lives, learns, and works, but it also interacts with nearly every policy area of concern, from jobs and the economy, education, and health care, to federal, state, and local government budgets. The changing patterns of immigration and the evolving consequences for American society, institutions, and the economy continue to fuel public policy debate that plays out at the national, state, and local levels. The Economic and Fiscal Consequences of Immigration assesses the impact of dynamic immigration processes on economic and fiscal outcomes for the United States, a major destination of world population movements. This report will be a fundamental resource for policy makers and law makers at the federal, state, and local levels but extends to the general public, nongovernmental organizations, the business community, educational institutions, and the research community.

The Lived Experiences of African International Students in the UK Jun 30 2021 International student migration makes a significant contribution to higher education in the United Kingdom, with Southern Africa, and Nigeria in particular, positioned joint sixth in the top ten of sending countries. Many of these student-migrants, in supplementing their finances to fund their studies in the United Kingdom, undertake employment. Temporary and/or part-time employment is integral to the student-migrant experience, despite the express purpose of their admission into the United Kingdom

designated for study purposes and not work. This explicit object is reflected in restrictions affixed to international students' employment rights whilst studying; they are generally restricted to a maximum of 20 hours of work per week during term time and proscribed from working full time or as independent contractors. Given the scant regard this topic has received in the existing literature, this study offers an examination of students' lived employment experiences under these rules. The study aims to offer a contribution, first in respect of the employment experiences of student-migrants through the analytical framework of 'precarity' by examining the various manifestations of insecurity in the students' lived realities, nuanced by structures of migration control and labour market temporalities. Secondly, by adopting the socio-legal schema of legal consciousness, the study considers the student-migrants' relationship with the law by way of the legal restrictions on their employment and examines their agency as evidenced through efforts to derogate from these rules.

Augmentation of Brain Function: Facts, Fiction and Controversy Nov 23 2020 The Volume II is entitled "Neurostimulation and pharmacological approaches". This volume describes augmentation approaches, where improvements in brain functions are achieved by modulation of brain circuits with electrical or optical stimulation, or pharmacological agents. Activation of brain circuits with electrical currents is a conventional approach that includes such methods as (i) intracortical microstimulation (ICMS), (ii) transcranial direct current stimulation (tDCS), and (iii) transcranial magnetic stimulation (TMS). tDCS and TMS are often regarded as noninvasive methods. Yet, they may induce long-lasting plastic changes in the brain. This is why some authors consider the term "noninvasive" misleading when used to describe these and other techniques, such as stimulation with transcranial lasers. The volume further discusses the potential of neurostimulation as a research tool in the studies of perception, cognition and

behavior. Additionally, a notion is expressed that brain augmentation with stimulation cannot be described as a net zero sum proposition, where brain resources are reallocated in such a way that gains in one function are balanced by costs elsewhere. In recent years, optogenetic methods have received an increased attention, and several articles in Volume II cover different aspects of this technique. While new optogenetic methods are being developed, the classical electrical stimulation has already been utilized in many clinically relevant applications, like the vestibular implant and tactile neuroprosthesis that utilizes ICMS. As a peculiar usage of neurostimulation and pharmacological methods, Volume II includes several articles on augmented memory. Memory prostheses are a popular recent development in the stimulation-based BMIs. For example, in a hippocampal memory prosthesis, memory content is extracted from hippocampal activity using a multiple-input, multiple-output non-linear dynamical model. As to the pharmacological approaches to augmenting memory and cognition, the pros and cons of using nootropic drugs are discussed.
